<b>Description</b>			
In previous versions (Almirah gem version <= 0.2.0) there were two options to define document title:  1. Pandoc title format (% Title) 2. First heading level 1 in the document (# Title)  At the same time document title was considered as heading level 0 and was not numerated. It lead to the mess how to process two heading 1 elements with no pandoc title (first one was considered as level 0, second one as level 1).  The following was decided:  1. The only pandoc title is level 0 section (not numerated) 2. If there is no pandoc title - the first section (any level) is considered as a document title 3. But this section (the first one) has its level (not level 0)
